Personal Attack User Instructions

Red "Attack" Button
Press the **RED** button **twice** to activate an "Attack" alarm

Red LED
The LED flashes when the battery needs replacing or when the Belt Clip is in an ALARM mode

Blue "Reset" Button
To reset the system after an alarm, point the YELLOW BUTTON towards the alarmed ceiling or room unit. Then press and hold the "**BLUE**" reset button for approximately five seconds.
The Belt Clip will emit a double beep, and the ceiling or room unit will be reset

"Yellow" Assist Button
Press the **YELLOW** button **twice** to activate the "Assist" alarm

Snatch Cord
Pull the snatch cord from the Belt Clip to set-off an "attack" alarm.
After the incident is resolved, re-insert the snatch-pin into the BeltClip case before resetting the BeltClip

Radio & *Infra Red* **BeltClips**

Getting the best from the personal attack system

1. <u>ALWAYS</u> wear your BeltClip on an outer garment or belt, for example, wear it attached to a:
- Blouse/Shirt/Jacket/Tunic breast Pocket
- Belt

2. <u>NEVER</u> carry your BeltClip in a pocket - it will not work correctly, exposing you to danger.

3. <u>NEVER</u> wear your BeltClip under clothing e.g. under a pullover or jacket - it will not work and expose you to danger.

4. <u>DO NOT</u> take your BeltClip home after your shift. The system will detect it is missing and notify the staff by way of a Fault Alarm.

5. <u>DO</u> press the **RED Button twice** to set off the **ATTACK** Alarm.

6. <u>DO</u> press the **YELLOW Button twice** to set off the **ASSIST** Alarm.

7. <u>DO</u> test your BeltClip at the start of your shift. This can be done at anytime in the vicinity of a Ceiling or Wall unit, by pressing the **BLUE** side button. The BeltClip will bleep and on release of the Blue button the Ceiling or Wall unit will emit a low bleep.

8. Last Known Location (LKL) - If you raise an alarm in an area not covered by a ceiling unit, the system will display the **L**ast **K**nown **L**ocation of the BeltClip (**LKL**). This will change if the BeltClip in alarm moves within range/sight of a ceiling unit.

9. If you raise an alarm using the Snatch Cord, always **re-insert the Snatch Cord pin** into the hole in the BeltClip before resetting the System.

10. Only use the correct Lithium Battery
        (3.6v AA lithium, re-order code: BAT-AANL).
To **open the battery compartment**, insert the tip of a ball point pen into the hole adjacent to the compartment and press down to unlock whilst simultaneously sliding the cover open.
