

NOTE:
This is an Infrared receiving device

Optional Extra's

- o Infrared trigger devices

Description:

Typically this unit would be located outside beside an external door to register when a member of staff has left the building and stepped outside into the garden.

This Infrared receiver has a range of up to 10m (32.8ft) so any Infrared signals from trigger devices that are picked up locally by the device are sent by radio back to the control panel to help identify the location a particular member of staff.

It has a built in self test facility to check that the Infrared receivers are working correctly and because it does not have the need for any buttons the Infrared trigger device can send the reset signal to clear a call on the unit. This means the external Infrared receiver will never need to be touched during everyday use.

We recommend dual-tech belt clip or pendant devices are used with this device rather than Infrared only keyfobs. This ensures that a radio signal from the dual-tech transmitter unit will start an assistance call with the panel even if it isn't seen by an external receiver.

Note that Infrared reception may be limited on sunny days where the ambient Infrared levels being given off by the sun is high.

Levels of Call:

- o Patient / Staff / Emergency Call (from an Infrared trigger device)
- o Reset
- o Low Battery
- o Tamper fault
- o IR sensor fault

Technical Specification:

- o Reassurance LED and comfort tone
- o Factory set unit identity plus fully supervised monitoring
- o Conforms to BS6799 Class VI
- o Effective radiated power: 10mW integral aerial, approved to MPT1344 (licence exempt)

In pursuance of a policy of continued improvement, the company reserves the right to change the design and specification without prior notice
