

Location Units

Alarm Radio Monitoring
01568 610 016

These units are ceiling or wall mounted to provide location information of alarms triggered by staff/resident personal alarm devices (i.e. IR Fob, Pendant, BeltClip).

Location units are installed in rooms, corridors and stairwells throughout the building, where there is not a wall mounted call point, to provide location information of infra alarms signals from staff/resident personal alarm units.

Location units have a built in self test facility to check that the infra red receivers are operating properly.

Location units are reset by using the reset button on an infra red trigger device.

••• S64-CU

Ceiling Location Unit, with smoke detector styling allows this device to blend in with the everyday surroundings of a building.

Tamper fault monitoring to alert staff if it has been removed from its fixing base. (optional security locking screw)

••• Size	Height = 45 mm Diameter = 115 mm
••• Power	2 x 3.6v AA lithium battery pack

••• S64-EXT

Wall or ceiling mounted Location Unit.

Fitted with a back box and an internal seal to provide a IP65 rating, this location unit can be used outside the building.

Note: infra red reception outside may be limited on sunny days where the ambient infra red levels being given off by the sun is high.

••• Size	Height = 145 mm Width = 220 mm Depth = 25 mm (60 mm with back box)
••• Power	2 x 3.6v AA lithium battery pack
